

Pactum Corporate Capital Fund

Class C – USD | ISIN: IE00BMW44Y54

January 2022

Great opportunities ahead for 2022.

After successfully achieving our target returns for 2021, January saw the traditional slow start for the fund as deployment levels dropped across the board after the festive period. We also saw the expiry of one of our deals and the new deals in the pipeline were delayed due to COVID.

All assets backing the current investments are performing well. We've now processed over Euro 6bn of invoices in the last 2 years across our business without seeing a single invoice that was overdue by 60 days which reflects exceptionally well on our selection process.

2022 is shaping up to be a big year with six major deals currently in the pipeline for H1 which will allow us to take additional investments for the February cut-off, please speak to your client advisor now if you wish to insulate your portfolio from falling bonds and equities!

Investment Policy

PCCF provides liquidity to Europe's leading brands by financing receivables portfolios. The fund focuses on financing high-quality receivables (investment grade equivalent) via European Notes. The diversified portfolio aims to generate attractive risk premia from receivables with short-term maturities (30-90 days) and low default rates (<1.0%). The current target return is 3% p.a.

The fund's strategy takes advantage of the fact that structural niches are emerging in the financing markets due to the ongoing tightening of regulation in the bank lending business, higher capital adequacy requirements, rising costs, and increasing risk management requirements. These create attractive opportunities for specialised, flexible capital providers outside the banking sector and for qualified investors looking for investments with an above-average risk/return profile.

Investment Highlights

- Access to attractive returns from high-quality receivables with very low investment risk ("investment grade")
- Low portfolio risks due to receivables-secured financing with short-term maturities
- Above-average liquidity to comparable investments due to monthly redemption with 30 days notice
- Excellent overall diversification, as counterparties (several hundred) and receivables are highly diversified
- Low correlation with traditional and alternative investments and therefore a high diversification potential
- Professional due diligence and selection of receivables, ongoing monitoring, supported by state-of-the-art technology
- European, regulated fund structure with corresponding legal security and reliable service partners
