

Pactum Corporate Capital Fund

Class C – USD | ISIN: IE00BMW44Y54

March 2022

An exciting future for PCCF.

March continued in the same vein as the rest of 2022 so far with no portfolio changes. All the underlying's are still performing perfectly and there is still no effect on our portfolios from the problems in Ukraine. As highlighted last month, we will relaunch the Pactum Corporate Capital fund in May within a stand-alone new vehicle with The Apex Group in Ireland. Investors should now have all submitted their redemption notices for the Credit Suisse based version of the fund and we look forward to you joining us once again in the new vehicle which will take over all the existing positions and continue to offer steady, non-correlated returns backed by high-quality obligations. Please don't hesitate to contact our sales team who will be in touch shortly to walk you through the process to resubscribe into the new vehicle, meanwhile we thank all of you again for your ongoing faith and support.

¹⁾ Class C launch date 01. February 2021.

Investment Policy

PCCF provides liquidity to Europe's leading brands by financing receivables portfolios. The fund focuses on financing high-quality receivables (investment grade equivalent) via European Notes. The diversified portfolio aims to generate attractive risk premia from receivables with short-term maturities (30-90 days) and low default rates (<1.0%). The current target return is 3% p.a.

The fund's strategy takes advantage of the fact that structural niches are emerging in the financing markets due to the ongoing tightening of regulation in the bank lending business, higher capital adequacy requirements, rising costs, and increasing risk management requirements. These create attractive opportunities for specialised, flexible capital providers outside the banking sector and for qualified investors looking for investments with an above-average risk/return profile.

Investment Highlights

- Access to attractive returns from high-quality receivables with very low investment risk ("investment grade")
- Low portfolio risks due to receivables-secured financing with short-term maturities
- Above-average liquidity to comparable investments due to monthly redemption with 30 days notice
- Excellent overall diversification, as counterparties (several hundred) and receivables are highly diversified
- Low correlation with traditional and alternative investments and therefore a high diversification potential
- Professional due diligence and selection of receivables, ongoing monitoring, supported by state-of-the-art technology
- European, regulated fund structure with corresponding legal security and reliable service partners
